Merlinus Anglicus Junior:

OR THE

STARRY MESSENGER

For the Year of our Redemption, 1696.

And from the Creation, according to Sacred Writ, 5645

Being Bissextil, or Leap-Year.

Wherein is contained, (1) *Astronomical* and *Meteorological Observations*. (2) The State of the Year, deduced according to ART, from the Solar Ingresses, Eclipses, various Configurations, Aspects and Conjunctions of the *Planets*. (3) The *Rising* and *Setting* of the *Sun*, *Moon* and *Stars*: Also her *Southing*; Together with many useful Tables pertinent for such a Work, Accommodated to the Meridian of *London*, which lies in the *Latitude* of 51 deg. 32 min. North, but may indifferently serve (without sensible Error) for any other part of *Great Britain*. To which is added *Monthly Observations* and *Astrological Predictions* (or *Conjectures*) upon the whole Year, &c. Also an *Ephemeris* of the *Diurnal Motions* and *Aspects* of the *Planets*, &c. the like (in all particulars) not extant.

By HENRY COLEY, Teacher of the *Mathematicks*, and the *Celestial Science* in *Baldwin's-Garden*.

The Five and Twentieth Impression.

Alius alio plura invenire potest, Nemo omnia.

And he changeth the Times and the Seasons, he removeth KINGS, and setteth up KINGS; he giveth Wisdom to the Wise, and Knowledge to them that know Understanding, Dan. 2. ver. 21.

LONDON,
Printed by *John Heptinstall*, for the Company of *Stationers*, 1696.

The *Julian* or Old Account used in *England*.	1696	The *Gregorian* or *New Style* used Beyond Sea.

This Table shews the Interest of any sum of Money from 1 l. to 100 l. from a day to a year. And by the help of Addition you may compute the Interest of any sum whatsoever; and note that for the greater exactness the penny is divided into 100 parts, so that 25 parts are a farthing, and 50 parts an half-penny, and 75 parts 3 farthings, &c. *Example.*

The Interest of 100 l. for six months one week and one day, is thus found by the Table.

		l.	s.	d.	q.
Interest of 100 l.	for 6 mon.	01	0	0	00
	for 1 week.	00	2	3	61
	for 1 day.	00	0	1	04

James	2	1633	1685	Feb. 6.		0	Abdicated Decemb.		1688

King William and Queen Mary Crown'd April 11. 1689.

Began or Proclaim'd Feb. 13. 1688.

Monarchs are God's Vice-Roys, the Imperial *Throne*,
No hand but Heavens *Parliament* doth own;
Their lawfull *Scepters*, Power divine doth sway,
But Subject's Work, and Duty's to obey.
Good Kings and *Emperors*, Born to Command,
Are fortunate in all they take in Hand;
They *reap* the blest'd Fruit which they have *sown*;
Who *prize* their *People's good* more than their own.
Who swerves from this, on Shelves and Rocks do run;
Self-Interest hath all the World undone.

Astronomical Propositions, &c. Began last year, continued.

8. The Frigid Zone begins from the Polar Circle, in which the greatest Nights and Days are made so much greater, by how much the *Vertex* of the several Habitations therein approaches nearer to the Pole, untill such time as it becomes a parallel Sphere.

In nomine Dei hunc annum incipio.

Thanks be to God, we are now arrived to the year 1696, wherein we may justly expect very many remarkable Overtures in mundane Affairs in General, and in Particular as famous Transactions in our English Nation, and some other Kingdoms and Nations, not far remote from us. From the various Configurations of this Month much variety of Matter may be produced, the benevolent *Trine* of the *Sun* and *Jove* salutes the world at the beginning of the year, doubtless with some very pleasing News, and we are in dayly Expectation of some great thing. May the Endeavours and Consultations of those noble Heroes that sit at the Helm of Judicature be crowned with prosperous Success, now & ever.

In which they in the Northern Part have this Privilege, That the longest day is seven days and more, longer than the greatest day which they in the South enjoy, by reason of the Suns longer stay in the Septentrional (or Northern) Signs, wherein he moves more slowly in the place of his Apogeum in Cancer.

☽'s Mutations.

☽ Full Moon the 6 day at mid-night.
☌ Laſt Quarter the 13 day at 11 at night.
● New Moon the 20 day at 10 at night.
☽ Firſt Quarter the 28 day at 8 at night.

And ſo the whirls perform'd. Thar oft a Flood
Turns round a Wheel and whirls the weighty Wood.

D.	☽ Riſe and Set.	High W.L.B.	Lunar Aſpects ☉	☿	♀	♂	♃	♄	Aſtrological Conjectures or Obſervations.
1	1 M 36	11 7	△	△	☌				The Heavens ſeem ſtill to repreſent the Actions of Mankind in a hopefull way of Reconciliation, and their Spirits at this time not ſo violent, as of late; nor have we any other Grounds but to conjecture that the great affairs of moſt Princes of *Europe* tend to Unity and Concord. God preſerve the famous City of *London*, and her worthy Citizens from dangerous Diſeaſes and other Caſualties —. We ſeem bleſſed with comfortable hopes of a better underſtanding of matters now depending. God direct the great affairs of *England*, *Scotland* and *Ireland* in *Particular*. The *French* Monarch begins by this time to contemplate new matters and is willing to retire.

Mettius Spero.

We may now Discern many Negotiations Design'd to Compose the Present Differences not as yet Conclud'd. We hope still for the Best. *England* receives good Intelligence from Remote Parts, and the Allies of *Great Britain* seem in a better posture of Complyance than what is generally Reported; the Month is usher'd in with some Notable Configurations of the *Sun*, and the Two Superior Planets, whence Good Tyding may be expected, and still a hopeful Unity carried on: And if the Sins of the Nation occasion not God's Anger or Vengeance to fall upon us, we may be happy. Here is Plentiful Matter for Ambassadors to worm upon, and a great deal of Work yet to be done; which appears without Slaughter or Bloodshed. Blessed are the Peace-makers.

(11) Proceeding Eastward; the First of which is *Aries*, the Second *Taurus*, &c. which order is called the Succession, or Sequence of the Signs; as the contrary Order, the Precedence of the Signs; the *Zodiack* and *Ecliptick* Measure, the Secondary Motions of the Planets, as the Equator does the first. (11) The

There happens a hateful Quartile of *Saturn* and *Mars*, from those Signs called *Cardinal*, at the beginning hereof, which may produce in the *Macrocosme* very Ill Effects, amongst the rest —— Strange Diseases, which may Afflict both Man and Beast. We hope the Angry Frowns of Heaven may Dart down their Influence Remote from us. But 'tis strange if Contentions, Quarrels, and other Controversies do not suddenly break out; also Robberies, Murthers, and perhaps Losses by Shipwrack, may now salute our Ears: but for other kind of Actions, as to War, I cannot Reasonably expect it, since the Generality of Mankind are now much Inclin'd to Peace and Retirement. *Exurgat Deus & Dissipentur Anglorum Inimici,*

Sept. Accompt.

(11) The Longitude of the *Stars* is Numbered in the *Ecliptick* from the beginning of *Aries*, according to the Sequence of the Signs, unto a greater Circle, passing by the Poles of the Ecliptick, and place of the Star; as the Longitude of a place on Earth is Reckon'd on the Equator from the first Western Meridian, to the Meridian passing by the place propos'd.

Many are the Benevolent Configurations of this Month, whence therefore it may be expected a Month of Business, wherein many Serious Debates may take up the Counsels of the most Generous Spirits of *Europe*, for now without doubt there is Plentiful Matter to Work upon, and various Reports arrive from most Parts of *Christendom*, which in the General are very Good and Satisfactory, and now we may say, The World begins to Mend.

It's a long Run that never Turns.

Sub Deo semper Agunt,

I shall not concern my self with the Great Turk, or his Holyness; but consider what may be the Fate of Old England, which I Conclude to be Really Happy.

(12.) From the *Ecliptick* to the *Poles*, are Reckon'd the *Latitude* of the *Stars*. Which Latitude is an Arch of a great Circle, passing by the *Poles* of the *Ecliptick* and Center of the Star, Intercepted between the *Ecliptick* and the Star. These *Arches* are called the *Circles* of *Latitude*, and the Points between the *Equator* and *Ecliptick* are either Northern and Southern, *Et contra*.

(13) The *Ecliptick* contains the places of all Stars. For a Star is said to be in that degree of the *Ecliptick*, through which the Circle of Latitude of the said Star passes; So the Stars being in the *Solstitial-colours*, are said to be in the first degree of *Cancer* and *Capricorn*, by which Reason all the Stars are referr'd to some one of the 12 Signs.

☉	6 A	20	4 m	49			△	♂	☍		The Actions of this Month in General may be very hopeful and pleasing, and probably an Eminent Elderly Person receives Preferment amongst us, or some other Advantage. A great part of this Month is spent in Counsels, and most Judicious Contrivances Vigorously Managed, still tending to the Regulations of Differences yet Depending; and most Persons Principally Concern'd being almost wearied out with Long Expectation, seem willing to Agree and Comply with any Reasonable Proposals. Very Serious Negotiations now on Foot; and about this time the Grievances and Complaints of the Distressed in many Countreys are taken into Consideration. Now—

To Sing of Peace, Plenty, and Pleasant Things, Is Welcome News to Peasants, States and Kings.

December

(14) The Colures passing by the Poles of the World, and the four *Cardinal-points* of the *Zodiack*, Intersect each other at *Spherical* Right Angles in the Pole of the World. They are so called, because in an Oblique Sphere they seem Mutilate and Defective, since one part of them is always Depress'd beneath, whilst the other is elevated above the Horizon.

Astrological Conjectures, or Observations.

The Year draws near to an end, and notwithstanding so many Strange Transactions, which, throughout the same, has been agitated both in *England*, and other Countreys of *Europe*, yet we continue (at least among our selves) in Peace at home, and in a fair way of Peace abroad also, if not already Concluded. Let us expect to Receive Grateful Intelligence from several parts of *Europe*, and I hope by this time we have a Prospect of Better days.

Faxit Deus.

Here ends December, *bringing up the Rear,*
And after it, in Order, the new Year
Comes Marching on with speed; observe we may,
Time steals upon us, and soon slides away.
Short are the Days, short are our Lives, and we
Must shortly hence, and shall Translated be.
But ere the Old Year Terminateth quite,
Such as are free to Feasting may Invite.

31	9 46	11 23	0 0	0 m 41	0 0	1 36

By this Table you may find the Moons Southing for every day, the true time of the Moons being between any two of these Southings that is regulated to the Meridian of London. So the half difference between the first and third of March is 48 m. which added to 6 h. 46 m. against the first day, it makes 7 h. 34 m. for the Moon's Southing the 2d day. After noon. And so in others

The Dominion of the Moon in MAN's Body passing under the Twelve Zodiacal Constellations.

♈ Head and Face.

The Characters of the Seven Planets.

♄ Saturn, ♃ Jupiter, ♂ Mars, ☉ Sol, ♀ Venus, ☿ Mercury, ☽ Luna, ☊ Dragon's Head, ☋ Dragon's Tail.

Manilius upon the Twelve Signs Paraphrased.

♈ The Princely *Ram* glitering in Golden Wool,
♉ Wonders to see the backward Rising *Bull*,
♊ With submiss Looke beckons the *Twins*; next whom
♋ *Cancer*, who after him sees *Leo* come;
♌
♍ Him *Virgo* follows, then the Scales that weigh
♎ In even *Ballance* equal Night and Day,
♏ Draw on the *Scorpion* with his Fiery Sting,
♐ At which the *Centaur* with his Shaft levelling,
Seems ready to let fly: To these comes on
♑ The *Goat*'s contracted Constellation.
♒ *Aquarius* next pours from his Urn a Flood,
♓ Whilst the glad *Fish* to the lov'd Waters scud.

These Characters are no Enchanting Toys,
For crafty Knaves to blinde Credulous Fools:
But Wisdom-sacred-Marks, that briefly represent
The several Artful Objects therein meant:
Why learn them not, and (by them right apply)
Use the true Ground-work of Astrology.

READers, you are welcome now to Ninety Six!
Let Love and Loyalty our Hearts all fix.
I envy no Man, but have freely lend
This *New-Years-gift* unto my Country Friend.
Minerva I implore to be my Guide,
And keep my Genius steddy, that it slide
Not from Truth's Golden Path; may all my Lines!
More fixed be, than these unfixed Times.
Whilst Heaven has motion, Changes there will be,
Let's all submit to *Fortune* patiently;
The *Diurnal Influx* always doth foreshow
These mighty Motions carry'd on below.
Accept such Counsels therefore for your good,
As from *Heaven's Mystick* Text, is understood;
What's so is told, and for the rest my *Prayers*
To him that over-rules ill-boding Stars,
Shall be, that His duty be diverted from us,
And all Repent. So *Lord have mercy on us.*

By way of Prologue to the ensuing Discourse, Let it be observed, That *Astrologers* do not maintain a *Fatal Necessity*, or that the *Stars* have Power over our Wills, they only *Gently incline*, but not *force*, or *compel* the *Will* of *Man*, from whence all Humane Actions as from their Original do Naturally flow, and of this Judgment are all that ever writ of *Astrology*, of which there are almost an Infinite Number, and all with one consent Teach no further than our *Schoolmen* and *Divines* do second them, namely, that the *Heavens incline*, but not *compel*, because they have not Direct Power upon the Will of *Man*, as aforesaid —— And such kind of Questions in *Philosophy* and *Divinity* as these, remain I think to this day undecided. As first, what the knowledge of the separated Substances or Spirits is? Whether they have it by their Essence, or by Species Abstracted, or Concreated, or as they behold the Idea's of things in *verbo*, or by Revelation, or whether this Knowledge of theirs be to Singularities or no? As if they look into the course of the Stars, as there is no Question but they do, for the Stars are Singular Bodies, yet *Aristotle* doth directly deny this, who maketh the knowledge of Singularities only to pertain to Sense: And the Schools of the *Peripatetics* deny that the Superiour

Orbs

Intelligences know the Orbs of the Interiour? And there is no Reason given to the contrary why the Astrologer may not know the Heavenly Motions being Comprehended by Sense, though he appear not such as that their Intellectual Natures have any knowledge of them at all. This being premised, I proceed to my Judgment on the four Quarters of the Year according to my usual Method, which I shall methodically prefer as follows.

I. *Astrological Observations upon the Quarterly Ingress of the Year 1696. And first, of the Winter Quarter.*

WHich this Year Commences *December* 11th. 1695. about 4 min. past Noon. At which moment of time we have the beginning of *Capricorn* upon the Midheaven, and about 3 degrees of *Aries* upon the Ascendant, or Arising in the Latitude of *London*, the Moon is just Separated from the Opposition of the *Sun* and *Trine* of *Mercury*, and hasteneth to the *Opposition* of *Saturn*, and *Trine* of *Venus*; the *Sun* is in *Quartile* to *Jove*, and *Mercury* in *Square* to *Mars*. And thus stands the Position of the Heavens, and these are the most Remarkable things to be considered in the Scheme it self, and being the *Winter Season*, when nothing of Action can be expected: Hence we may judge many Deliberate Councils and Sober Consultations concerning the Grand Affairs of Nations, such as concern Laws, Customs, Religion, *&c.* will take up the greatest part (or be vigorously carryed on this Quarter.) The Moon is in *Cancer*, and (as I said) hasting to the Opposition of *Saturn*; whence the Common People will be very uneasie, and must expect to suffer much in many Countries of *Europe*; and at the same time there is great Endeavours used for the Regulating divers Disorders, and Composing such Differences which the Vulgar are in many Countries too subject to fall into. Now we may expect to hear frequently Complaints of their great Impoverishment, heavy Burthens, Ruine, with intolerable Grievances, which they have, and do yet Labour under in divers Countries near adjacent to *England*.— *Saturn*'s Position upon the Cusp of the 11th. House in his own Domal Dignities we hope may produce good things in the end, but with much struggling and Debate; and hence 'tis very much to be feared that the Conclusions and Determinations of this Quarter may prove as various as successless. And many Persons will have just cause to Pray, *Da pacem Domine diebus nostris.*

The Angles of this Figure in the *Winter Ingress* are moveable

and *Cardinal*, *Saturn* and *Mars* Rule the Principal Angles, viz. the *Ascendant* and *Midheaven*, and the *Moon* and *Venus* the *North* and *West* Angles; the *Moon* is just departing from the Sextile of *Mars* in *Virgo* in the sixth House, and hasting to the *Opposition* of *Jupiter*. This gives us good hopes that much pains will be taken to good purpose in the end, altho' it may prove tedious; for to all probability most of the Winter Quarter will be spent (amongst the Grandees of Nations and Kingdoms) in Counsels and serious Consultations, there being now plentiful matter to insist upon; and several Nations and Countries of *Europe*, and other Parts of the World concerned therein; amongst the rest *England* more especially, *France*, *Germany*, *Poland*, *Denmark*, *Spain*, *Portugal*, *Normandy*, *cum multis aliis*; for *Loca in quibus Fortunæ inveniantur & loca quæ post aspiciunt, significat bonum secundum naturas earum*. Those Places wherein the Fortunes are posited, as also those, whom they Friendly behold, to such they signifie good according to their Natures. Which is all I shall say of this Subject upon this *Quarter*, since the Quality of this stupendious Contingency we must leave to time to manifest; for *Particularia prædicit nemo, sine numine afflatus*, None but those enduced with Divine Inspiration can foretel Particular Events.

As to the *Diseases* of this *Quarter*, they should be many. They are *Chronical* Distempers and Infirmities that now afflict in general, and many Aged People end their days thereby. And for the Season of the Year, we conjecture it may be various, much Rain, and Snow, and moist Weather, many Foggy Mists, and frequent Gusts of *East* and *North-East* Winds, unwholsom for Mankind. Thus much for this Quarter.

II. *Of the Spring Quarter.*

WHich, according to the New Tables of my Friend, now ready for the Press, *viz. Scientia Stellarum*, [to be Printed with *Astronomologo vel Uranie Practica Redivivo*] Commences *March* the 9th. 2 h. 43 m. P. M. 1696. In which *Figure* we have about 13 d. of *Taurus* Culminating, and 25 d. of *Leo* Ascending, the Moon Defluxing from the *Opposition* of the *Sun* and *Mercury*, applying to the *Trine* of *Venus*, *Sextile* of *Mars*, and *Square* of *Saturn*; and *Venus* is hasting to the *Opposition* of *Mars*, who is just Rising with the *Ascendant*, and with an Active fixed Star of the First Magnitude, called the *Lion's Heart*. And thus stands the Position, which he that is able, and desires to see, may soon effect if he pleases. From this Foundation I

deduce

deduce this Judgment; In the Figure the Angles are all fixed, which foumates a continuance of various and tuneable Councils tending to several purposes, but too often and frequent Interruptions during this Quarter.

If the Almighty hath not determined to put in Execution some further Vengeance and Calamities against many Nations and People for the sins both of their Rulers and Subjects, we have great hopes there may not be that Effusion of Blood this Year as in some Years last past; for in the figure there is no *Planet* vernally *Angular* but *Mars*, who is only opposed by *Venus*, and he upon the *Ascendant* with a violent fixed Star of the First Magnitude, shewing the great Strength and Courage of the *English* Nation, and its Confederates, who in all probability may become Conquerours over their Enemies, and consequently in the end oblige them to an Agreement of Peace and Tranquility, or at least a Cessation of Arms for a time, which will be an Introduction to a happy Conclusion. We ought also to consider the Position of the Superiour Planets in every Revolution, here *Mars* is Rampant enough, *Saturn* strong, but under the Earth, yet there is *Trine* to *Jupiter* in *Virgo* in the second House from Cold Earthy Signs; and 'tis said, *Quicquid ligat Saturnus, solvit Jupiter*, where the Malice or Deceit of *Saturn* operates, there the Wisdom, Honesty, or Religion, of *Jupiter* (*viz.* Persons so represented) do at last overcome, and bring things to a happy Conclusion, which I have great hopes may be this Year effected. The Position of *Saturn* and *Jove* applying to a second *Trine Aspect*, and within the Orbs thereof, which compleatly touch at the beginning of *July* next, in the *Summer Quarter*, in all probability may compleat the Work; for *Jove*'s Position in the Second, tho weak, usually portends Prosperity, Peace, and Plenty to the Subject, notwithstanding their continual Fears; whence they may take Encouragement, and trust to Providence. And now in our *Astrological Conjectures*, if we should not fully hit the white, let none Traduce us, or think it strange, since none can presume to Promise a Certainty and Infallible Præscience of Future Events or Contingencies, but as the Learned *Physician*, who *Prognosticates* what the Issue may be of a Distemper in a sick Patient. In our *Vernal Figure*, which is fixed, and therefore may be sufficient for the Judgment of the ensuing Year, 'tis the *Sun* that rules the *Ascendant*, and disposes of a *Rampant Mars* therein, and a Noble Fixed Star just arising; a

Position no way contemptible, and the Major Testimonies are Benevolent: from hence, according to Natural Causes, we have, I say, very great hopes that all the Confusions of *Europe* are now drawing to a Conclusion, although some Arguments may be deduced to the contrary; for 'tis very easie to raise a Judgment pro & con, from any *Figure*; and when all is done, we must at last Judge from the Major or most prevalent Testimonies. And hence in plain terms, there appears so much Intricacy, Dissembling Actions, and Treacherous Self-ended Consultations, that 'tis almost impossible to *Predict*, whether the Subtil *Peace-maker* or *Martialist* will prevail. Yet I say, so far as may be conjectured rationally from the Rules of Art, and the Consideration of the present Juncture of Affairs, the most material Configurations of this Year do give rather hopes of a Happy Peace in the *European* Kingdoms, than a continued War, which Judgment is chiefly to be understood to take place principally amongst those People who suffer by the sad Effects of War at present. *I pray God a happy Peace and Union may be speedily setled amongst them.*

The *Diseases* of this *Spring Quarter* are like to be *Acute Fevers*, much *Sweating* and *Corruption* of *Blood*, *Surfeits*, *Small-Pox* to an high degree, *Great Pox*, *Consumption* of the Lungs, and violent *Tertian Fevers*, &c. Many *Robberies* in the *North* and *North-East* Roads: And as to the *Weather*, much variety thereof, violent Showers, many Tempests at Sea, and damage thereby. Of which more particularly in the Months.

III. *Of the Summer Quarter.*

THis Quarter takes beginning *June* the 10th. at 3 h. 18 m. P. M. which gives *Leo* 19 d. upon the Midheaven, and next 3 d. of *Scorpio* Ascending, the Moon separates from the *Trine* of the Sun, and applies to the *Conjunction* of *Jove* and *Mars* near the Meridian. 'Tis a moderate good Position of the Heavens, and promises a quiet pleasant Season in the general; yet there are some things under Debate, not yet determined, as the *Conjunction* of *Mercury* and *Saturn* will denote: But in regard 'tis from Moveable Cardinal Signs, it cannot be of long continuance. Now, in our Figure *Saturn* (as well as the Sun) signifies Eminent Persons, both for Quality and Office, and Ministers that in the Courts of Princes (or where ever such matters are Debated, or in Agitation) the same Generous and Heroick Spirits do Act their Parts with all sincerity, to put an end to Publick Differences, and to settle a Peace and Unity between

Nation

Nation and Nation, yet at that very time there will be some Person or Persons amongst them that out of some Private Design, or Self-Interest, shall most subtilly endeavour to sow *Tares*, or convey and cast in the Seeds of Division, which may much protract to hopeful an Enterprize, to the great Dissatisfaction of many Honest Loyal Hearts.— But having largely spoken to the Transactions of the Year in the two former Quarters, as also in the Monthly Observations, here need not much more be said upon this, nor upon the next.

IV. *Of the Autumnal Quarter,*

WHich Commences this Year *September* the 11*th.* 16 hours after Noon, *viz.* the 12*th.* at 4 in the Morning; at which time we have 3 d. of *Gemini* upon the *Midheaven*, also near 9 d. of *Virgo Ascending*, and the *Moon* in *Square* to *Mars*, *Venus*, *Jupiter*, and *Mercury* in *Conjunction*, *cum multis aliis*. From hence I judge the minds of the Vulgar are, or have been somewhat disturb'd, or corrupted with Seditious Thoughts and Discontents, the Souldiery uneasie and discontened, amongst the rest there are a sort of People, called the *Mobb*, which would be Active enough: But the Position of *Jupiter* (according to second Causes) should heal all, and turn the Stream to Admiration— And in short, upon the whole matter, I say once more, there is great hopes that the Sorrows of Mankind shall be abated, and by degrees quite taken away: Also Controversies and frequent Differences amongst Eminent Persons in the World shall cease, at least for some time, but we fear they may break out again afresh, notwithstanding the Endeavours of good Spirited Persons to preserve Peace on all sides. But the Actions of this present Year 1696, do not wholly depend (Astrologically) either upon these Quarterly *Ingresses* of the *Sun* or *Eclipses*, but there are other matters to be considered also, which I have not omitted. There is danger this Quarter may prove more Sickly than ordinary; but the greater sort of Cattel should stand moderately well this Year, but the smaller sort more subject to Diseases. *Corn* should bear a moderate good Price, and *Coals* should too often advance, *&c.* But of these matters consult Mr. *Houghton*'s Weekly Paper, which is of singular use.

V. A Table shewing the Rising, Southing, and Setting of the *Pleiades*, or *Seven Stars*, for every fifth day throughout the Year: Of great use for finding the Hour of the Night, &c.

The use of this and the next Table, follows them.

m.	JANUARY.						FEBRUARY.						MARCH.

Pleiades	0 a 0	0	0	0 4 0N	5	♂ ☽

VII.

VII. *The Explanation and Use of the precedent Tables of the Fixed Stars.*

THE Table of *Pleiades*, or *Seven Stars*, contains Ten Columns, the first, towards the left hand, expresses every fifth day of each Month, as 1,6,11,16,21,26. The second shews their Rising in Hours and Minutes: The third their Southing: The fourth their Setting; as is plain by their very Tables: And observe, That the Letter (a) denotes after Noon, and (b) before Noon; and so in the fifth, sixth, and seventh Column the same, as also the eighth, ninth, and tenth, is continued the Rising, Southing, and Setting of the *Pleiades*, for every fifth day throughout the Year, as is plain and intelligible to the meanest Capacity. As for Example: *Viz.*

Suppose, I desire to know the Rising, Southing, and Setting of the *Seven Stars*, *January* the 21*st*. I find by the Table they Rise 16′ after 10 before Noon, South 33′ past 6 after Noon, and Set 48′ past 2 in the Morning. And so against the 6th. of *August*, they Rise 29′ past 9 after Noon, or at Night, they South 45′ past 5 in the Morning, (as the Letter m denotes) and they Set 1′ past 2 after Noon, *Et sic in aliis*. In the second Table of *Fixed Stars*, there are seven Columns. (1.) The Names of the Stars. (2.) Their Rising. (3.) Their Southing. (4.) Their Setting, either before or after the *Pleiades*, (5.) Their Latitude. (6.) Their Magnitude. (7.) Their Natures; as the Tables direct. In the Column of Rising, Southing, and Setting, is now expressed how many Hours they Rise, South, and Set, either before or after the *Seven Stars*, as the Letters (a) and (b) denotes. *Example*: The *Pleiades* South the 21 of *January* 32′ past 6 at Night; and in the second Table, I find that *Syrius*, or the great Dog Star, Souths 3 h. 3′ after; which added to 6 h. 32′, the Sum is 9 h. 35′, or 35′ past 9 at Night; at which time *Syrius* is upon the *Meridian* with 39 *d.* 30′ of South Latitude: He is a Star of the first *Magnitude*, and said to be of the Nature of *Jupiter* and *Mars*. The same is to be understood of all the rest: *Usus promptus facit.*

VIII. *Of the Eclipses this present Year.*

THis Year the Luminaries will be *Eclipsed* no less than four times; Twice the Sun, and as often the Moon; but only those of the Moon visible in our *Hemisphere*, which I present as followeth, *viz.* The first is on the 6th. day of May, the beginning at 9 h. 49′ 54″. The beginning of Total Darkness 11 h. 0′

25′

25″. The middle of the *Eclipse* 11 h. 47′. 55″. The end of Total Darkness 12 h. 35′. 25″. The end and full recovery of Light 13 h. 35′. 56″.— The Second is on the 30th. of *October*. The begin. 3 h. 9′. 47″. The beginning of Total Darkness 4 h. 8′. 9″. The middle 4 h. 55′. 42″. The end and full recovery of Light 6 h. 41′. 37″. P. M. What the Portents of *Eclipses* may be, consult my last Years Book, and there you may be satisfied.

IX. *Concerning the Business of Horary Questions, let this be observed.*

Cornelius Agrippa truly tells us that the Ground and Foundation of all *Astrological Questions*, depends upon the Mind, being elevated into the excess of any Desire, taking of it self an Hour and Opportunity most convenient and efficacious, on which the *Figure* of *Heaven* being made, the *Astrologer* may then Judge from it, by an apt Genius, and thereby plainly discover the thing which the Querent has an impulse upon his Mind and Spirits to know. And then is the Question purely Radical, when the Querent comes with a real Intent to be satisfied in his, or her Horary Doubts. Now the principal motives that induces the Querent to ask Questions, are, first, the motion of the Soul, when any Person is excited really of his own Invention to Propose a Question. The Second is the motion of the Superiour Bodies, when any one asketh, what they do imprint into him in the thing Quesited, and what may be the Event thereof. The Third is the motion of the Free-will, which may be an Act of the Querent himself; for the Motion or Influence of the *Planets* are not sufficient unless our Free-will incite us to Propose the Question. To help the Memory take these plain Verses.

The Astrological Signification of the Twelve Cœlestial Houses.

The *First* House signifies our Life and Health;
The *Second*, the wealth, our Money, Substance, Wealth.
The *Third*, our Kindred, Neighbours, Journeys, and
The *Fourth*, our Fathers, Persons, Houses, Land.
The *Fifth*, our Off-spring, Pleasures, and our Joys;
The *Sixth*, our Servants, and what Life destroys.
The *Seventh*, Publick Enemies, a Wife;
The *Eighth*, her Portion, and the end of Life.
The *Ninth*, our Wisdom, Piety, and Crown:
The *Tenth*, our Trade, our Honour, and Renown.
The *Eleventh*, Friends, and what our Hopes Impose;
The *Twelfth*, our Cattle, Prisonment, and Foes.

1. 2. 3. 4. 5. 6.
Vita, Lucrum, Fratres, Genitor, Nati, Valetudo,
7. 8. 9. 10. 11. 12.
Uxor, Mors, Pietas, Regnum, Benefactor, Carcer.

X. *Of*

X. *Of Directions in Nativities, for the Use of Students.*

THE old way of *Directions* in *Nativities* by *Semidiurnal*, & *Semi-nocturnal* Horaries, seems so intricate and troublesom (which is *Ptolomy*'s way) that 'tis enough to confound a Man, if he be not very expert in Calculation of that kind, and therefore now since *Argol* hath fitted Tables for the work, the old way is by most *Artists* laid aside: But you may work the old way according to the Directions given by *Origanus* in his first Tome, where there is both *Precept* and *Example*. And indeed the Work is not so troublesom if a Man have but convenient *Tools* to work withal, which the Ancients had not; and therefore they ought to be excused if they were not so exact as they should have been. Now the *Analogy* or *Proportion* that this old way depends upon, is as followeth: But it must be considered first, that the *Semidiurnal Ark* of the *Significator* should be known; that is, how low long he is from his *Rising*, to the *Meridian*, and from the *Meridian* to his *Setting*, in the place where he is, which is either the *Sum* or *Difference* of *Ascension* in the *Latitude* of the place and 90 degrees, according as he shall be posited in Northern or Southern Signs, and above or under the Earth: Then seek the *Right Ascension* of both *Significator* and *Promittor*, and also their *Oblique Ascension* in the *Latitude* of *Birth*: Then Subtract their Distance in *Right Ascension* and *Oblique Ascension*, the lesser from the greater, and note the *Difference*, and then the *Proportion* is, As the *Semidiurnal Ark* of the *Significator*, is to the Distance from the *Meridian* (in R. A.) so the *Difference*, before noted, to the proper *Difference*, which must be added or subtracted to, or from their Distance in *Right Ascension* as the case shall require (for which the other Difference will give Direction) the Sum or Remainder is the Ark of *Direction* this way. And this Rule is sufficient in all cases, only the Distance must be taken from the 4*th*. House, when under the Earth, *&c.* Take *Origanus*'s Example, *pag.* 395. first *Tome*, done this way, and much more easie than there directed. And it shall be his of *Saturn* to the Body or *Conjunction* of the *Sun*, *pag.* 314.

Example.	Asc. Rect.	Ob. Ascens.
M. C. ♒ 6 d. 10′ ——	308 d. 34′	360 57
♄ 25 d. 30 ♓ Lat. So. 1 d. 33 —	356 29	
☉ in ♉ 1 d. 42′ cum Circulo ——	400 14	379 57
1 Differ.	43 45	19 29
2 Differ.	24 16	

The

The Proportion.	d.	Co. Ar.	Logist. Log.
As the Semidiurn. Ark	86	1	628727
To *Saturn*'s Dist. à M. C.	47	55	345864 } add.
So the aforesaid 2d. Diff.	24	16	316316 } to
To the Propor. Differ. Subtr.	13	31	290907

And this subtracted from 43 d. 45. the first Differ. in R. A. there remains 30 d. 14. which is the Ark of Direction, as in *Origanus*.

Which may be thus performed according to the old way by *Semidiurnal Arks*, but much easier than the Ancients did it, and by help of the *Logist. Logarithms*, 237.

	Co. Ar.	
As the Semidiurnal Ark of *Saturn* 5 h. 44.	746344	}
To the Semidiurnal Ark of the Sun 7 h. 21	764444	} add.
So the Distance of *Saturn* à Merid. 47 d. 55	345864	}
To the Distance in that Ark 61 d. 26	2566652	

And this Subtracted from the Sun's Distance from the Meridian 91 d. 40. The Remainder 30 d. 14 is the Ark of Direction, as before.

But this way of Direction, which is called *Ptolomy*'s, doth not agree with that of *Argol*'s or *Regiomontanus*. For in this Example of ♄ to the ☉ the Pole of Position of ♄ is 42 d. 50. his Ob. Asc. under that Pole 359. 35. of the ☉ *cum Circulo* 384 d. 42. and the Ark of Direction 25 d. 7. Differing above 5 degrees. But if the Significator had been near to M. C. or I. C. or near the Ascendant (as in *Origanus* his 2d. Example) the Difference will not be great, for if you try it *Argol*'s way, the Ark of Direction of the 2d. Example will be 33. 34. and in *Origanus* of the ☉ to the □ of ♄. 34. 50.

No man can every Person's Humour fit,
For some through Envy, some for want of wit,
Have ever treated Authors with Abuse,
Such is the World's base Vice, and sottish Use:
If any Carp, whose minds are ill at ease;
'Tis not my Foes, but Friends I seek to please.

ADVERTISEMENTS.

AN *Idea* of *Geography* & *Navigation*: Containing easie Rules for finding the *Latitude* and Difference of *Longitude* of Places, by Observation of the Sun, Moon, and Stars, with all other matters necessary in Navigation. An Excellent Piece, the like

like not hitherto Extant, &c. By *Samuel Newton*, Master of the Mathematical School at *Christ's Hospital*. Printed for *Christopher Wilkin*, at the *Flower-de-Luce* in *Little Britain*, and Sold likewise by several Booksellers in St. *Paul's* Church-yard, and about the *Royal Exchange*, *London*.

ALso there is now Publisht by *George Parker*, an *Ephemeris* for the Year 1696. more exact than any extant, calculated *de Novo*, from the *Carolina Tables*, with all necessary Tables therein; Sold at his House, at the *Blew Ball* and *Star* in *Salisbury Court*, and by many Booksellers in *London*.

MR. *Robert Bateman's* Famous *Spirit of Scurvy-Grass*, both *Plain* and *Golden*, which have perform'd so many Eminent Cures in the *Dropsie*, *Scurvy*, and most other Distempers, are no where prepared but at the House he formerly dwelt in, in St. *Paul's-Chain*, *London*, near *Doctors-Commons*; Sold there by Mr. *John Hooker*, and by none but by such as have it from thence; all others sold in his Name are Counterfeits. Beware thereof. Price One shilling the Bottle Sealed with the Old Seale. The said Mr. *John Hooker* sells the *Grand Balsamick*, or Health-procuring Pills, Approved by the most Eminent *Physicians* of *England*, to be one of the safest and most pleasant Purgers in the World. Their Vertues are at large in a Printed Book given with them. Price One Shilling the Box.

Dickenson's Lozenges, Famous for the Cure of Coughs, Catarrhs and Hoarseness, being also a great Cordial and Sovereign Preservative against all contagious Distempers, malignant Air and Unwholsom Weather, well approved of by the Chief *Physicians* of the *Colledge*, to whom the true Receipt has been communicated by the Publisher hereof, and are now rightly prepared only by *James Shipton*, Apothecary, at the *Crown* in *Hatton Garden*.

MR. *William Boyse*, the Famous *English Operator* in *Glass*, that lately lived in *Bell-Savage-Yard* on *Ludgate-Hill*, is now removed to the sign of the *Golden Griffin* in St. *Jones's Lane*, near *Clerkenwell*, where he maketh all sorts of *Artificial Eyes* exactly like the Natural.

MR. *John Rosel*, Physician and Chirurgeon, his Salve of Scurvy-Grass, both Plain and *Golden*, or *Purging*, is the most strongest, and powerful that is sold. Those that Buy it may return it again without loss, if it prove not so; this he does for the Closet of any Physician, and is most Admirable in the Scurvy, *Dropsie*, Gout, and most other Diseases. Also his Lozenges for Colds, Coughs, and Consumptions, with his Famous Powder that kills all sorts of *Worms*. Sold at his House, at the Two Red Posts, against *Gray's-Inn* in *Holborn*. Each sold for One shilling.

A Life Portable Spirit of Scurvy Grass, both Plain and Purging, at Six Pence a Glass (see Book as with out go the Price of the Chapter) which fights the Decaies of the Doctor and Nurson, is made and Sold by his Daughter, (who prepared it several Years in that Business, Live time) the blew Lion in Leather-Lane, at Mr. Thurlo's, a Carpenter, over against the Crown Back-Gate, where the said Spirit of Scurvy Grass is Sold, and at many other places in the City. Whose Vertues are the same with the former, as is exprest at large in the Bill given for its Use. The Bottles are sealed with the Three Cross Crosslets and Chequer.
